Magnetic.Parking barriers are a complete barrier solution for parking systems. The design is complemented by high functionality that meets nearly any requirement. The barriers are available in two standard colors, white or orange, and contain the MGC control unit, an integrated 2-channel detector module, and a VarioBoom gate arm.

Magnetic.Parking.Pro barriers are well suited for high use systems with short opening times of 1.3 seconds. Compared to the Magnetic.Parking models, the Pro version offers a higher throughput in the parking facility, additional color options, programmable I/O, multiple open/close speeds and additional expansion options with plug-in modules as well as exclusive accessories.

- **Magnetic.Access / Magnetic.Access-L**

Magnetic.Access barriers are complete, cost-oriented solutions for access control to public parking places, company premises, or any other application. The design is complemented with high functionality that meets nearly any requirement. The barriers are available in two standard colors, white or orange, and contain the MGC control unit, an integrated 2-channel detector module, and the VarioBoom gate arm.

Magnetic.Access-L models contain the same components as Magnetic.Access barriers with the additional advantage of a drive system adjusted for boom lengths up to 15 feet.

- **Magnetic.Access.Pro / Magnetic.Access.Pro-L / Magnetic.Access.Pro-H**

Magnetic.Access.Pro barriers are well suited for use in high volume access systems with short opening times as of 1.3 seconds. Compared to the Magnetic.Access models, the Pro version offers a greater functional scope, additional color options, and additional expansion options with plug-in modules and exclusive accessories. They contain the MGC Pro control unit, an integrated 2-channel detector module, and the VarioBoom gate arm.

Magnetic.Access.Pro-L models contain the same components as Magnetic.Access Pro barriers with a drive system adjusted for the longer gate arm. Please note when ordering a Magnetic.Access.Pro-L barrier and boom with a length greater than 15 feet a pendulum support or support post is required.

Magnetic.Access.Pro-H models are designed specifically for access solutions with a skirt. They contain the same components as Magnetic.Access Pro-L but the housing is taller in height and comes with a straight MicroBoom instead of a VarioBoom.
